hlforge.dev Taipei, Taiwan

SUMMARY

Frontend Engineer with 6+ years of experience and an MFA in Design & Technology from Parsons. Bridges design and engineering — translating ambiguous requirements and design intent into pixel-perfect, accessible React UI on enterprise-scale platforms. Integrates AI-assisted development workflows (Claude Code, Cursor) into daily engineering practice.

EXPERIENCE | TRADE-VAN

Senior Frontend Engineer — 03/2023 - Present

- Served as the team's primary frontend and accessibility resource across multiple Taipei City Government digital platforms, translating Figma designs into pixel-perfect, WCAG 2.1 AA-compliant interfaces.
- Took ownership of two legacy frontend rebuilds with no formal specifications or documentation, reverse-engineering the National Park Service portal's UI conventions to independently reproduce its visual language and component patterns across separate codebases.
- Drove the Indigenous Carbon Sink ESG platform from 0-to-1 as the sole frontend contributor, owning the end-to-end design and frontend implementation—from defining the visual system (SCSS architecture, color system, and responsive layouts) to translating stakeholder requirements into production-ready code.
- Owned EZSIGN's visual identity and B2B onboarding experience — designing the logo, color system, and landing page from scratch, then simplifying a complex legal signing process into a guided, trust-focused Wizard flow.

Frontend Engineer — 03/2021 - 03/2023

- Refactored the ECAR cross-agency vehicle platform and NSRRC research portal from legacy markup to a structured SCSS + ES6+ architecture, including complex multi-step forms with dynamic field logic and data-heavy admin interfaces.
- Established a unified visual style guide and component conventions for both platforms, working directly with internal users to align the UI with existing government workflows.

Full Stack Developer — 03/2020 - 03/2021

- Built the APEWS portal — a centralized entry point providing unified access and consistent UI across 10+ independent IoT surveillance subsystems, with shared visual styles and cross-system SSO navigation.
- Built a real-time visualization dashboard integrating Google Maps API and Chart.js to display live container tracking states across 10+ interconnected subsystems, designed under a zero-scroll high-density layout constraint.
- Developed the data layer using Java Spring MVC and SQL to support high-concurrency container tracking, ensuring consistent state between backend and the frontend visualization layer.

EDUCATION

Master of Fine Arts (MFA) in Design and Technology — 08/2016 - 06/2018

Parsons School of Design - The New School — New York, United States

Bachelor of Science in Computer Science — 09/2010 - 06/2014

National Taipei University — Taipei, Taiwan

Exchange Program in Computer Science — 09/2012 - 06/2013

EFREI – Engineering School of Digital Technologies — Paris, France

SKILLS

Core Tech

JavaScript (ES6+) · React · Semantic HTML5 · SASS · CSS Architecture

Design

Design Systems · UI/UX Design · Pixel-perfect UI · Figma · A11y (WCAG 2.1 AA)

Engineering & Tooling

TypeScript · NPM · Git · Tailwind CSS · Webpack · Vite

AI Development Tools

Claude Code · Cursor

CERTIFICATIONS

Meta Front-End Developer Professional Certificate

Meta (via Coursera) | Issued 2026

LANGUAGES

Chinese: Native

English: Fluent / Professional Working Proficiency

AWARDS

Scholarship for Studying Abroad for Excellent Students

Ministry of Education, Taiwan | **2017**
Awarded a prestigious national scholarship (top-tier selection) to support advanced Master's studies in Design and Technology at **Parsons School of Design**, New York.

Scholarship for Excellent Students to Study Overseas

Ministry of Education, Taiwan | **2012**
Recognized as an outstanding Computer Science student to participate in an international engineering exchange program at **EFREI**, Paris, France.
